## KOMBUCHA LEATHER

BACTERIAL CELLULOSE

RENEWABLE - VEGAN - COMPOSTABLE  
MADE OF BY-PRODUCT OR WASTE

[www.amsterdamsefabrik.com](http://www.amsterdamsefabrik.com)

### INGREDIENTS & TOOLS:

- 1 SCOBY Pellicle (7-12mm thick),  
grown on sugar solution and beer

Tools: a silicone mat or smooth surface for drying, soap, kitchen towels

### THIS IS A VARIATION ON:

Bacterial leather by various authors  
(see link at QR code). Changes made:  
did not use treatment for this sample,  
only left it to air dry after washing.

### MAKING PROCEDURE:

- Take the pellicle out of the liquid
- Wash in soapy cold water, rinse
- Dry with a kitchen towel.
- Place the pellicle on the silicone mat and let it dry (near an open window for example)
- When the top is dry (after a few days), turn the pellicle around and let the other side dry

Suitable for home-composting.
