KOMBUCHA LEATHER

BACTERIAL CELLULOSE

RENEWABLE - VEGAN - COMPOSTABLE
MADE OF BY-PRODUCT OR WASTE

www.amsterdamse.com

INGREDIENTS & TOOLS:

- 1 SCOBY Pellicle (7-12mm thick),
grown on sugar solution and beer

Tools: a flat textured surface for drying,
soap, kitchen towels

THIS IS A VARIATION ON:

Bacterial leather by various authors
(see link at QR code). Changes made:
did not use treatment for this sample,
only left it to dry on a textured surface
after washing.

MAKING PROCEDURE:

- Take the pellicle out of the liquid
- Wash in soapy cold water, rinse
- Dry with a kitchen towel.
- Place the pellicle on the surface/
mat and let it dry (near an
open window for example)
- When the top is dry (after a few
days), turn the pellicle around
and let the other side dry

Suitable for home-composting.
