MANGO LEATHER

FRUIT WASTE

RENEWABLE - VEGAN - COMPOSTABLE

MADE OF BY-PRODUCT OR WASTE, REUSABLE

www.amsterdamuas.com

INGREDIENTS & TOOLS:

- 1 mango, with skin, overripe
- 1 tbsp potato starch
- 15 g white vinegar
- 5g salt
- vegetable oil (release agent)

Tools: cooker, flat surface, pot, spoon, scale, oven, blender

THIS IS A VARIATION ON:

Overripe Mango Leather by Beatriz Sandini (Ephemeral Fashion Lab).

Used potato starch instead of corn or tapioca starch.

MAKING PROCEDURE:

- Remove the stones
- Puree the fruit and skin
- Dissolve the starch in water
- Mix the puree and starch
- Heat the mixture, boil 1 min
- Spread onto surface
- Dry for 16 hrs at 50 degrees
- Press and air dry (alternating)

No special conditions required for composting. Re-using the mango leather requires further research. Re-use by shredding and heating is probably possible.
