### INGREDIENTS & TOOLS:

- 1 SCOBY Pellicle (7-12mm thick), grown on sugar solution and beer
- 1 teaspoon of Uulki natural vegan wood oil & wax

Tools: a flat surface for drying, soap, kitchen towels

### THIS IS A VARIATION ON:

Bacterial leather by various authors (see link at QR code). Changes made: using Uulki wood oil & wax as treatment. This treatment gives smoother results if applied *before* drying the pellicle, but it will take longer to dry.

### MAKING PROCEDURE:

- Take the pellicle out of the liquid
- Wash in soapy cold water, rinse
- Dry with a kitchen towel.
- Place the pellicle on the surface
- Apply some wood wax and rub it in on the top
- Let it dry (near an open window)
- When the top is dry (after a few days), turn the pellicle around and rub wood wax on the other side.
- Leave until dry.

Suitable for home-composting.
