KOMBUCHA LEATHER

MICROBIAL

RENEWABLE - VEGAN
MADE OF BY-PRODUCT OR WASTE

www.amsterdamuas.com

INGREDIENTS & TOOLS:

- Kombucha SCOBY grown with beer
- Turpentine - 1 tbsp
- Bees wax - 1 tbsp
- Boiled linseed oil - 1 tbsp

Tools: gloves, mask, small glass jar, a pot, a spoon, cooker, silicone mat

THIS IS A VARIATION ON:

Open Source Kombucha by thr34d5.

No changes. See original source (qr code) for links to recipes for growing the SCOBY. Growing SCOBY takes about 4 weeks, or it can be bought.

MAKING PROCEDURE:

- Wear gloves and mask when handling turpentine
- Wash the SCOBY in cold soapy water, dry it, place on the mat
- Melt beeswax au bain marie, take a teaspoon, mix with linseed oil (the boiled variety!) and turpentine that are slightly warmed up over the bain marie.
- Rub treatment one side, wait a 3-4 days or until dry.
- Turn over and treat other side.

The dried SCOBY itself is compostable, the post-treatment is not. Try other post-treatment options for home compostable material.
