www.amsterdamus.com

INGREDIENTS & TOOLS:

- 1 fresh uncooked salmon skin
- denatured alcohol 96% - 200 ml
- glycerine - 200 ml + 50 ml
- dish washing soap - 1 tsp

Tools: wooden board, nails, hammer, large jar with lid, blunt scraping tool to remove scales

THIS IS A VARIATION ON:

Heritage Kit Curriculum, by Chugachmiut Heritage Preservation, Anchorage, Alaska USA

Added glycerine as a softener (post-treatment)

MAKING PROCEDURE:

- Scrape all the fish meat, scales and slime off the skins
- Wash in cold soapy water, rinse
- Put in jar, add glycerine and alcohol. Shake vigorously
- Tan for min. 3 days, shake vigorously every few hours
- Rinse in water and apply glycerine generously
- Nail the skin to wooden board and leave to dry in the shade
- Optional: rub with glycerine

Fish skins are considered a waste product, try to get them as such. Tanning liquid can be reused. Suitable for home composting.
